Analyst Insights

Commentary on developments throughout the year.

Analyst Access

For prompt responses to urgent and unique questions

The propagation of connected devices through the market – and through homes – is fundamentally refashioning the relationship between consumers, and deliverers of media. With economic consequences that extend from hardware and software markets, to the media services industry, the media industry itself, and the wider investment community, connectivity requires any company wishing to thrive in the media-and-technology space to track – rigorously – just how rapidly this segment is undergoing change.

The IHS Markit Connected Devices Intelligence Service provides unrivalled insight into the evolution of the connected home.

Conceived around two pillars of information – devices; media distribution technology – Connected Devices datasets provide highly accurate, continuously-updated information on the connected device landscape, and on the technology ecosystems that content service providers rely on to distribute online media.

Research Coverage Overleaf

BENEFITS

- Integrated view of the connected-device landscape across 75 countries and 7 regions
- Detailed profiles of content service provider technology deployments and tech strategies
